

Who is b4?

b4value.net GmbH is founder and technology supplier of the TRAFFIQX® Network – the business network for worldwide document and data exchange between companies. Together with well-known partners we offer companies of all sizes and industries the technology to automate business processes and to promote digitalization – without interfering with existing systems or work processes. b4value.net GmbH is one of the most successful spin-offs of the German Research Institute for Artificial Intelligence (DFKI) in Kaiserslautern. An exciting field of activity in a growing market, powerful teams, flat hierarchies and the spirit of a steadily growing company offer ideal developing conditions for newcomers as well as experienced employees.

Welcome to the Adventure!

Die b4value.net GmbH
as an employer

Be a part of designing the future

Key values of the TRAFFIQX® Network:

300.000 members

11 providers

30 million transactions per year

The Company Culture

We live flat hierarchies. From the youngster and trainee to colleagues from the founding period up to the management – each opinion counts and each idea moving us forward is valued.

We address unpleasant issues to learn from them and to improve them in time. We also celebrate our successes and attach great importance to a good working climate.

We honor performance and make no distinction between company affiliation and rank.

Our Vision

We are no lone warriors. The TRAFFIQX® Network consists of well-known companies. Together we form the most important network for the exchange of documents between companies – nationally and internationally.

The potential in this growing market is immense and exciting challenges await. To meet these challenges, we need team players with a pioneering spirit and a passion for a revolutionary company.

The Work Environment

In addition to exciting tasks, modern technical equipment awaits as well as the willingness to use state of the art technologies and to give unconventional ideas a chance.

Flexible working hours and a close collaboration with the German Research Institute for Artificial Intelligence (DFKI) give us the input, that promotes creativity and turns advanced technologies into real products.

We're very proud that our work is a significant contribution to environmental protection aswell.

If you are enthusiastic about this idea and you see it as a challenge, we want to welcome you to the adventure!
